ETHStaker, the new earn token for a bluechip cryptocurrency. ETHStaker collects fees and these fees are used in the pool. Your holding is a percentage of the pool. The more people buy and sell, the more rewards there will be.

ETHStaker ecosystems allow investors to earn Ethereum with 20% sell tax when sold and 10% buy tax when transactions occur. ETHStaker also features other unique aspects such as whale protection and dump protection. ETH can be claimed by going through our website www.ethstaker.app or by using our DApp.

PROJECTS & FEATURES

Ever-Changing ETH Rewards:

Fees generation and releasing it to the holders, we collect it to the pool and rewards the holders with Binance-Pegged Ethereum. Pools and rewards are always changing based on buys, sells, and collects by others and your percentage holdings.

Collective Staking for All Holders:

Our token operate as a community driven profit token. All holders benefit from driving forward the token, the more you hold our ETHStaker, the more Ethereum and ETHStaker you gain.

Taxes and Tokenomic:

Fees our 10% is charged for every buy transaction and 20% is charged for every sell transaction that is then put into the ETHStaking station, making ETH for you everyday.

Claim Station

Make a claim station where ETHStaker holders can claim all of the earning systems with our launch pad, thus we will be the leader in Ethereum earning eco-system as the name ETH indicates

TECHNICAL
ANALYSIS

TECHNICAL ANALYSIS

Max Sell
250,000 ETHStaker
20% sell tax

Max Buy
None
10% buy tax

Max Hold
1 million ETHStaker
per wallet

Slippage
Set to 30% when in
high demand

Cooldown
30 minutes between
each sell

ETHStaker will burn some amount of token when it reached an x number of holders and market cap (burn is if any of those capstones are reached). Think 25 million ETHStaker burns each at 10,000% growth, at 100,000% growth, and at 1,000,000% growth.

LP is locked in the contract, which mean that no one can pull it. It's the safest method of all. In Unicrypt or DXSale, you can set the time of lock, in contract, ETHStaker is locked forever. Contract is not renounced as ETHStaker may need some update in the future as the community grows and to adjust for more whale and anti-dump measures as we continue to grow.

Liquidity Lock: https://bscscan.com/tx/0x26bc08e19b367c713d2f6c84dbd7aedc17409256b747cf612ba0e2b456c111b7

Frequently Asked Question

FAQ

Why did ETHStaker lock it in the contract instead of the burn address?
Because of auto-liquidity function that let us generate liquidity so the floor will be higher and higher
